Package cs2212.team4

Interface Summary

Interface	Description
CourseADT	CourseADT implements the method interface for the Course class.
DeliverableADT	DeliverableADT implements the method interface for the Deliverable class.
GradeADT	GradeADT implements the method interface for the Grade class.
GradebookADT	GradebookADT implements the method interface for the Gradebook class.
StudentADT	StudentADT implements the method interface for the Student class.
StudentGradesADT	StudentGradesADT implements the method interface for the StudentGrades class.

Class Summary

Class	Description
Course	Course is the class that will be used to store all course students, deliverables, grades, and course information.
Deliverable	Deliverable is the class that will be used to store all course deliverables information.
Grade	Grade is the class that will be used to store student grades.
Gradebook	Gradebook is the class that will hold the information about all the courses in the application.
Student	Student is the class that will store all the student grades and informations.
StudentGrades	The StudentGrades class will contain all the grades for each Student.

Interface CourseADT

All Known Implementing Classes:

Course

```
public interface CourseADT
    CourseADT implements the method interface for the Course class.

Version:
    1.0 2/28/2014

Author:
    Zaid Albirawi
```

Method Summary	
Methods	
Modifier and Type	Method and Description
boolean	<code>addDeliverable(java.lang.String name, java.lang.String type, double weight)</code> Adds a Deliverable object to the deliverableList list, if there does not exist a duplicate Deliverable object inside the deliverableList list.
boolean	<code>addGrade(Student stud, Deliverable deliver, double grade)</code> Adds a grade to a Student object.
boolean	<code>addStudent(java.lang.String nameFirst, java.lang.String nameLast, int number, java.lang.String email)</code> Adds a Student object to the studentList list, if there does not exist a Student object inside the studentList list with the same number or email.
boolean	<code>editStudentEmail(Student stud, java.lang.String email)</code> Edits the Student object email, if the email does not belong to another Student object inside the studentList list.
boolean	<code>editStudentNumber(Student stud, int number)</code> Edits the Student object number, if the number does not belong to another Student object inside the studentList list.
boolean	<code>equals(Course crs)</code> An equals method.
boolean	<code>exportDeliverables(java.lang.String path)</code> Exports the Deliverable objects located in deliverableList list to a .csv file.
boolean	<code>exportGrades(java.lang.String path)</code> Exports the Grade objects located in every Student object inside the studentList list.
boolean	<code>exportStudents(java.lang.String path)</code> Exports the Student objects located in studentList list to a .csv file.
int	<code>findDeliverable(Deliverable deliver)</code> Finds the Deliverable object inside the deliverableList list.
int	<code>findStudent(int number)</code> Finds the Student object inside the StudentList list.
java.lang.String	<code>getCode()</code> Gets the course code.
Deliverable	<code>getDeliverable(int deliver)</code> Gets the Deliverable object inside the DeliverableList list at location deliver.
double	<code>getGrade(Student stud, int grade)</code> Gets the grade object inside the Grades object inside the Student object at location grade.
Student	<code>getStudent(int stud)</code> Gets the Student object inside the studentList list at location stud.
java.lang.String	<code>getTerm()</code> Gets the course term.
java.lang.String	<code>getTitle()</code> Gets the course title.
boolean	<code>importDeliverables(java.lang.String path)</code> Imports a Deliverable objects into the Course object.
boolean	<code>importGrades(java.lang.String path)</code> Imports a Student objects' Grade objects into the Course object.
boolean	<code>importStudents(java.lang.String path)</code> Imports a Student objects into the Course object.
boolean	<code>removeDeliverable(Deliverable deliver)</code> Removes a Deliverable object from the deliverableList list.
boolean	<code>removeGrade(Student stud, Deliverable deliver)</code> Removes a grade from a Student object.
boolean	<code>removeStudent(int number)</code> Removes a Student object from the studentList list.
void	<code>setCode(java.lang.String code)</code> Sets the course code.
void	<code>setTerm(java.lang.String term)</code> Sets the course term.
void	<code>setTitle(java.lang.String title)</code> Sets the course title.
java.lang.String	<code>toString()</code> A toString method.

Method Detail
getTitle
<pre>java.lang.String getTitle() Gets the course title. Returns: String, the Course object title.</pre>
getTerm
<pre>java.lang.String getTerm() Gets the course term. Returns: String, the Course object term.</pre>
getCode
<pre>java.lang.String getCode() Gets the course code. Returns: String, the Course object code.</pre>
getStudent
<pre>Student getStudent(int stud) Gets the Student object inside the studentList list at location stud. Returns: Student, the Student object.</pre>
getDeliverable
<pre>Deliverable getDeliverable(int deliver) Gets the Deliverable object inside the DeliverableList list at location deliver. Returns: Deliverable, the Deliverable object.</pre>
getGrade
<pre>double getGrade(Student stud, int grade) Gets the grade object inside the Grades object inside the Student object at location grade. Returns: Double, the grade of the Student object.</pre>
setTitle
<pre>void setTitle(java.lang.String title) Sets the course title. Parameters: title - String, the Course Object title.</pre>
setTerm
<pre>void setTerm(java.lang.String term) Sets the course term. Parameters: term - String, the Course Object term.</pre>
setCode
<pre>void setCode(java.lang.String code) Sets the course code. Parameters: code - String, the Course Object code.</pre>
editStudentNumber
<pre>boolean editStudentNumber(Student stud, int number) Edits the Student object number, if the number does not belong to another Student object inside the studentList list. Parameters: stud - Student, Student object. number - Integer, the Student object unique number. Returns: boolean, true if the number has been edited, false otherwise.</pre>
editStudentEmail
<pre>boolean editStudentEmail(Student stud, java.lang.String email) Edits the Student object email, if the email does not belong to another Student object inside the studentList list. Parameters: stud - Student, Student object. email - String, the Student object unique email. Returns: boolean, true if the email has been edited, false otherwise.</pre>
findStudent
<pre>int findStudent(int number) Finds the Student object inside the StudentList list. Parameters: number - Integer, the Student object's unique number. Returns: Integer, the position of the Student object in the studentList if the object exists, otherwise will return -1.</pre>
addStudent
<pre>boolean addStudent(java.lang.String nameFirst, java.lang.String nameLast, int number, java.lang.String email) Adds a Student object to the studentList list, if there does not exist a Student object inside the studentList list with the same number or email. Parameters: nameFirst - String, the Student object first name. nameLast - String, the Student object Last name. number - Integer, the Student object unique number. email - String, the Student object unique email. Returns: boolean, true if the addition was a success, false otherwise.</pre>
removeStudent
<pre>boolean removeStudent(int number) Removes a Student object from the studentList list. Parameters: number - Integer, the Student object unique number. Returns: boolean, true if the object was removed, false otherwise.</pre>
findDeliverable
<pre>int findDeliverable(Deliverable deliver) Finds the Deliverable object inside the deliverableList list. Parameters: deliver - Deliverable, the Deliverable object. Returns: Integer, the position of the Deliverable object in the deliverableList list if the object exists, otherwise it will return -1.</pre>
addDeliverable
<pre>boolean addDeliverable(java.lang.String name, java.lang.String type, double weight) Adds a Deliverable object to the deliverableList list, if there does not exist a duplicate Deliverable object inside the deliverableList list. Parameters: name - String, the Deliverable object name. type - String, the Deliverable object type. weight - Double, the Deliverable object weight. Returns: boolean, true if the addition was a success, false otherwise.</pre>
removeDeliverable
<pre>boolean removeDeliverable(Deliverable deliver) Removes a Deliverable object from the deliverableList list. Parameters: deliver - Deliverable, the Deliverable object. Returns: boolean, true if the object was removed, false otherwise.</pre>
addGrade
<pre>boolean addGrade(Student stud, Deliverable deliver, double grade) Adds a grade to a Student object. Parameters: stud - Student, the Student object. deliver - Deliverable, the Deliverable object. grade - Double, the grade. Returns: boolean, true if the grade was inserted successfully, false otherwise.</pre>
removeGrade
<pre>boolean removeGrade(Student stud, Deliverable deliver) Removes a grade from a Student object. Parameters: stud - Student, the Student object. deliver - Deliverable, the Deliverable object. Returns: boolean, true if the grade was removed successfully, false otherwise.</pre>
importStudents
<pre>boolean importStudents(java.lang.String path) Imports a Student objects into the Course object. Parameters: path - String, the path were the file is located.</pre>
exportStudents
<pre>boolean exportStudents(java.lang.String path) Exports the Student objects located in studentList list to a .csv file. Parameters: path - String, the path were the file is located. Returns: boolean, true if the Student objects were exported, false otherwise.</pre>
importDeliverables
<pre>boolean importDeliverables(java.lang.String path) Imports a Deliverable objects into the Course object. Parameters: path - String, the path were the file is located.</pre>
exportDeliverables
<pre>boolean exportDeliverables(java.lang.String path) Exports the Deliverable objects located in deliverableList list to a .csv file. Parameters: path - String, the path were the file is located. Returns: boolean, true if the Deliverable objects were exported, false otherwise.</pre>
importGrades
<pre>boolean importGrades(java.lang.String path) Imports a Student objects' Grade objects into the Course object. Parameters: path - String, the path were the file is located.</pre>
exportGrades
<pre>boolean exportGrades(java.lang.String path) Exports the Grade objects located in every Student object inside the studentList list. Parameters: path - String, the path were the file is located. Returns: boolean, true if the Grade objects were exported, false otherwise.</pre>
equals
<pre>boolean equals(Course crs) An equals method. Parameters: crs - Course, the Course object. Returns: boolean, true if the Course object is equal to this, false otherwise.</pre>
toString
<pre>java.lang.String toString() A toString method. Overrides: toString in class java.lang.Object Returns: String, the Course object information string.</pre>

cs2212.team4

Class Deliverable

java.lang.Object
cs2212.team4.Deliverable

All Implemented Interfaces:

DeliverableADT, java.io.Serializable

```
public class Deliverable
extends java.lang.Object
implements DeliverableADT, java.io.Serializable
```

Deliverable is the class that will be used to store all course deliverables information. team4-gradebook application

Version:

Constructor Summary

Constructors

Constructor and Description

Deliverable(java.lang.String name, java.lang.String type, double weight, int objId)
Constructor.

Method Summary

Methods

Modifier and Type	Method and Description
boolean	equals (Deliverable deliver) An equals method.
java.lang.String	getName () Gets the Deliverable object name.
int	getObjId () Gets the Deliverable object id.
java.lang.String	getType () Gets the Deliverable object type.
double	getWeight () Gets the Deliverable object weight.
void	setName (java.lang.String name) Sets the Deliverable object name.
void	setType (java.lang.String type) Sets the Deliverable object type.
void	setWeight (double weight) Sets the Deliverable object weight.
java.lang.String	toString () A toString method.

Methods inherited from class java.lang.Object

equals, getClass, hashCode, notify, notifyAll, wait, wait, wait

Constructor Detail

Deliverable

```
public Deliverable(java.lang.String name,
                  java.lang.String type,
                  double weight,
                  int objId)
```

Constructor.

Parameters:

- name - String, the Deliverable object name.
- type - String, the Deliverable object type.
- weight - Double, the Deliverable object weight.
- objId - Integer, the Deliverable object id.

Method Detail

getName

```
public java.lang.String getName()
```

Gets the Deliverable object name.

Specified by:

getName in interface DeliverableADT

Returns:

String, the Deliverable object name.

getType

```
public java.lang.String getType()
```

Gets the Deliverable object type.

Specified by:

getType in interface DeliverableADT

Returns:

String, the Deliverable object type.

getWeight

```
public double getWeight()
```

Gets the Deliverable object weight.

Specified by:

getWeight in interface DeliverableADT

Returns:

Double, the Deliverable object weight.

getObjId

```
public int getObjId()
```

Gets the Deliverable object id.

Specified by:

getObjId in interface DeliverableADT

Returns:

Integer, the Deliverable object id.

setName

```
public void setName(java.lang.String name)
```

Sets the Deliverable object name.

Specified by:

setName in interface DeliverableADT

Parameters:

name - String,the Deliverable object name.

setType

```
public void setType(java.lang.String type)
```

Sets the Deliverable object type.

Specified by:

setType in interface DeliverableADT

Parameters:

type - String,the Deliverable object type.

setWeight

```
public void setWeight(double weight)
```

Sets the Deliverable object weight.

Specified by:

setWeight in interface DeliverableADT

Parameters:

weight - Double,the Deliverable object weight.

equals

```
public boolean equals(Deliverable deliver)
```

An equals method. return boolean, true if the Course object is equal to this, false otherwise.

Specified by:

equals in interface DeliverableADT

toString

```
public java.lang.String toString()
```

A toString method. return String, the Deliverable object information string.

Specified by:

toString in interface DeliverableADT

Overrides:

toString in class java.lang.Object

cs2212.team4

Interface DeliverableADT

All Known Implementing Classes:

Deliverable

public interface **DeliverableADT**

DeliverableADT implements the method interface for the Deliverable class.

Version:

1.0 2/28/2014

Author:

Zaid Albirawi

Method Summary

Methods

Modifier and Type	Method and Description
boolean	equals (Deliverable deliver) An equals method.
java.lang.String	getName () Gets the Deliverable object name.
int	getObjId () Gets the Deliverable object id.
java.lang.String	getType () Gets the Deliverable object type.
double	getWeight () Gets the Deliverable object weight.
void	setName (java.lang.String name) Sets the Deliverable object name.
void	setType (java.lang.String type) Sets the Deliverable object type.
void	setWeight (double weight) Sets the Deliverable object weight.
java.lang.String	toString () A toString method.

Method Detail

getName

java.lang.String getName()
Gets the Deliverable object name.

Returns:
String, the Deliverable object name.

getType

java.lang.String getType()
Gets the Deliverable object type.

Returns:
String, the Deliverable object type.

getWeight

double getWeight()
Gets the Deliverable object weight.

Returns:
Double, the Deliverable object weight.

getObjId

int getObjId()
Gets the Deliverable object id.

Returns:
Integer, the Deliverable object id.

setName

void setName(java.lang.String name)
Sets the Deliverable object name.

Parameters:
name - String,the Deliverable object name.

setType

void setType(java.lang.String type)
Sets the Deliverable object type.

Parameters:
type - String,the Deliverable object type.

setWeight

void setWeight(double weight)
Sets the Deliverable object weight.

Parameters:
weight - Double,the Deliverable object weight.

equals

boolean equals([Deliverable](#) deliver)
An equals method. return boolean, true if the Course object is equal to this, false otherwise.

toString

java.lang.String toString()
A toString method. return String, the Deliverable object information string.

Overrides:
toString in class java.lang.Object

cs2212.team4

Class Grade

java.lang.Object
cs2212.team4.Grade

All Implemented Interfaces:

GradeADT, java.io.Serializable

```
public class Grade

void	setGrade (double grade) Sets the Grade object grade.
void	setWeight (double weight) Sets the Grade object weight.

Methods inherited from class java.lang.Object
equals, getClass, hashCode, notify, notifyAll, toString, wait, wait, wait

Constructor Detail

Grade

```
public Grade(double grade,
             double weight)
```

Constructor.

Parameters:

- grade - Double, the Grade object grade.
- weight - Double, the Grade object weight.

Method Detail

getGrade

```
public double getGrade()
```

Gets the Grade object grade.

Specified by:

- getGrade in interface GradeADT

Returns:

- Double, the Grade object grade.

getWeight

```
public double getWeight()
```

Gets the Grade object weight.

Specified by:

- getWeight in interface GradeADT

Returns:

- Double, the Grade object weight.

setGrade

```
public void setGrade(double grade)
```

Sets the Grade object grade.

Specified by:

- setGrade in interface GradeADT

Parameters:

- grade - Double,the Grade object grade.

setWeight

```
public void setWeight(double weight)
```

Sets the Grade object weight.

Specified by:

- setWeight in interface GradeADT

Parameters:

- weight - Double,the Grade object weight.

Constructor Summary

Constructors
Constructor and Description
Gradebook () A constructor of the gradebook class, will create an empty gradebook object.

Method Summary

Methods	
Modifier and Type	Method and Description
boolean	addCourse (java.lang.String name, java.lang.String term, java.lang.String code) Adds a Course object to the courseList list, if there does not exist a duplicate Course object inside the courseList list.
int	findCourse (Course crs) Finds the Course object inside the courseList list.
boolean	removeCourse (Course crs) Removes a Course object from the courseList list.
boolean	store (java.lang.String path) Stores the Course objects from the courseList list.

Methods inherited from class java.lang.Object
equals, getClass, hashCode, notify, notifyAll, toString, wait, wait, wait

Constructor Detail

Gradebook
public Gradebook () A constructor of the gradebook class, will create an empty gradebook object.

Method Detail

store
public boolean store(java.lang.String path) Stores the Course objects from the courseList list. Parameters: path - String, the path to where the data will be located. Returns: boolean, true if the objects were successfully exported, false otherwise.

findCourse
public int findCourse(Course crs) Finds the Course object inside the courseList list. Specified by: findCourse in interface GradebookADT Parameters: crs - Course, the Course object. Returns: Integer, the position of the Course object in the courseList if the object exists, otherwise will return -1.

addCourse
public boolean addCourse(java.lang.String name, java.lang.String term, java.lang.String code) Adds a Course object to the courseList list, if there does not exist a duplicate Course object inside the courseList list. Specified by: addCourse in interface GradebookADT Parameters: name - String, the Course object name. term - String, the Course object term. code - String, the Course object code. Returns: boolean, true if the addition was a success, false otherwise.

removeCourse
public boolean removeCourse(Course crs) Removes a Course object from the courseList list. Specified by: removeCourse in interface GradebookADT Parameters: crs - Course, the Course object. Returns: boolean, true if the object was removed, false otherwise.

cs2212.team4

Constructors

Constructor and Description

Student(java.lang.String nameFirst, java.lang.String nameLast, int number, java.lang.String email)
Constructor.

Method Summary

Methods

Modifier and Type	Method and Description
boolean	addGrade(int deliver, double grade, java.lang.String type, double weight) Adds a grade to the StudentGrades object.
boolean	equals(Student stud) An equals method.
double	getAsnAvg() Gets the Student object assignment average.
double	getAvg() Gets the Student object average.
java.lang.String	getEmail() Gets the Student object email.
double	getExmAvg() Gets a Student object exam average.
double	getGrade(int grade) Gets a Student object Grade object.
java.lang.String	getNameFirst() Gets the Student object first name.
java.lang.String	getNameLast() Gets the Student object last name.
int	getNumber() Gets the Student object number.
boolean	removeGrade(int deliver, java.lang.String type) Removes a grade from the StudentGrades object.
void	setAsnAvg(double asnAvg) Sets the Student object assignment average.
void	setAvg(double avg) Sets the Student object average.
void	setEmail(java.lang.String email) Sets the Student object email.
void	setExmAvg(double exmAvg) Sets the Student object exam average.
void	setNameFirst(java.lang.String nameFirst) Sets the Student object first name.
void	setNameLast(java.lang.String nameLast) Sets the Student object last name.
void	setNumber(int number) Sets the Student object number.
java.lang.String	toString() A toString method.

Methods inherited from class java.lang.Object

equals, getClass, hashCode, notify, notifyAll, wait, wait, wait

Constructor Detail

Student

```
public Student(java.lang.String nameFirst,  
              java.lang.String nameLast,  
              int number,  
              java.lang.String email)  
    Constructor.
```

Parameters:
nameFirst - String, Student object first name.
nameLast - String, Student object last name.
number - Integer, Student object unique number.
email - String, Student object unique email.

Method Detail

getNameFirst

```
public java.lang.String getNameFirst()  
    Gets the Student object first name.
```

Specified by:
getNameFirst in interface StudentADT

Returns:
String, the Student object first name.

getNameLast

```
public java.lang.String getNameLast()  
    Gets the Student object last name.
```

Specified by:
getNameLast in interface StudentADT

Returns:
String, the Student object last name.

getNumber

```
public int getNumber()  
    Gets the Student object number.
```

Specified by:
getNumber in interface StudentADT

Returns:
Integer, the Student object number.

getEmail

```
public java.lang.String getEmail()  
    Gets the Student object email.
```

Specified by:
getEmail in interface StudentADT

Returns:
String, the Student object email.

getGrade

```
public double getGrade(int grade)  
    Gets a Student object Grade object.
```

Specified by:
getGrade in interface StudentADT

Returns:
Grade, a Student object Grade object.

getAvg

```
public double getAvg()  
    Gets the Student object average.
```

Specified by:
getAvg in interface StudentADT

Returns:
Double, the Student object average.

getAsnAvg

```
public double getAsnAvg()  
    Gets the Student object assignment average.
```

Specified by:
getAsnAvg in interface StudentADT

Returns:
Double, the Student object assignment average.

getExmAvg

```
public double getExmAvg()  
    Gets the Student object exam average.
```

Specified by:
getExmAvg in interface StudentADT

Returns:
Double, the Student object exam average.

setNameFirst

```
public void setNameFirst(java.lang.String nameFirst)  
    Sets the Student object first name.
```

Specified by:
setNameFirst in interface StudentADT

Parameters:
nameFirst - String, the Student object first name.

setNameLast

```
public void setNameLast(java.lang.String nameLast)  
    Sets the Student object last name.
```

Specified by:
setNameLast in interface StudentADT

Parameters:
nameLast - String, the Student object last name.

setNumber

```
public void setNumber(int number)  
    Sets the Student object number.
```

Specified by:
setNumber in interface StudentADT

Parameters:
number - String, the Student object number.

setEmail

```
public void setEmail(java.lang.String email)  
    Sets the Student object email.
```

Specified by:
setEmail in interface StudentADT

Parameters:
email - String, the Student object email.

setAvg

```
public void setAvg(double avg)  
    Sets the Student object average.
```

Specified by:
setAvg in interface StudentADT

Parameters:
avg - Double, the Student object average.

setAsnAvg

```
public void setAsnAvg(double asnAvg)  
    Sets the Student object assignment average.
```

Specified by:
setAsnAvg in interface StudentADT

Parameters:
asnAvg - Double, the Student object assignment average.

setExmAvg

```
public void setExmAvg(double exmAvg)  
    Sets the Student object exam average.
```

Specified by:
setExmAvg in interface StudentADT

Parameters:
exmAvg - Double, the Student object exam average.

addGrade

```
public boolean addGrade(int deliver,  
                       double grade,  
                       java.lang.String type,  
                       double weight)  
    Adds a grade to the StudentGrades object.
```

Specified by:
addGrade in interface StudentADT

Parameters:
deliver - Integer, the grade insertion position.
grade - Double, the grade.
type - String, the deliverable type.
weight - Double, the grade weight.

Returns:
boolean, true if the grade was inserted successfully, false otherwise.

removeGrade

```
public boolean removeGrade(int deliver,  
                          java.lang.String type)  
    Removes a grade from the StudentGrades object.
```

Specified by:
removeGrade in interface StudentADT

Parameters:
deliver - Integer, the position at where the grade will be inserted.
type - String, the type of the deliverable.

Returns:
boolean, true if the grade was removed successfully, false otherwise.

equals

```
public boolean equals(Student stud)  
    An equals method.
```

Specified by:
equals in interface StudentADT

Parameters:
stud - Student, the Student object.

Returns:
boolean, true if the Student object is equal to this, false otherwise.

toString

```
public java.lang.String toString()  
    A toString method.
```

Specified by:
toString in interface StudentADT

Overrides:
toString in class java.lang.Object

Returns:
String, the Student object information string.

Interface StudentADT

All Known Implementing Classes:

Student

public interface **StudentADT**

StudentADT implements the method interface for the Student class.

Version:

1.0 2/28/2014

Author:

Zaid Albirawi

Method Summary

Methods	
Modifier and Type	Method and Description
boolean	addGrade (int deliver, double grade, java.lang.String type, double weight) Adds a grade to the StudentGrades object.
boolean	equals (Student stud) An equals method.
double	getAsnAvg () Gets the Student object assignment average.
double	getAvg () Gets the Student object average.
java.lang.String	<b b="" getemail<="">() Gets the Student object email.
double	getExmAvg () Gets the Student object exam average.
double	getGrade (int grade) Gets a Student object Grade object.
java.lang.String	getNameFirst () Gets the Student object first name.
java.lang.String	getNameLast () Gets the Student object last name.
int	getNumber () Gets the Student object number.
boolean	removeGrade (int deliver, java.lang.String type) Removes a grade from the StudentGrades object.
void	setAsnAvg (double asnAvg) Sets the Student object assignment average.
void	setAvg (double avg) Sets the Student object average.
void	setEmail (java.lang.String email) Sets the Student object email.
void	setExmAvg (double exmAvg) Sets the Student object exam average.
void	setNameFirst (java.lang.String nameFirst) Sets the Student object first name.
void	setNameLast (java.lang.String nameLast) Sets the Student object last name.
void	setNumber (int number) Sets the Student object number.
java.lang.String	toString () A toString method.

Method Detail

getNameFirst
<pre>java.lang.String getNameFirst()</pre> <p>Gets the Student object first name.</p> <p>Returns:</p> <p>String, the Student object first name.</p>

getNameLast
<pre>java.lang.String getNameLast()</pre> <p>Gets the Student object last name.</p> <p>Returns:</p> <p>String, the Student object last name.</p>

getNumber
<pre>int getNumber()</pre> <p>Gets the Student object number.</p> <p>Returns:</p> <p>Integer, the Student object number.</p>

getEmail
<pre>java.lang.String getEmail()</pre> <p>Gets the Student object email.</p> <p>Returns:</p> <p>String, the Student object email.</p>

getGrade
<pre>double getGrade(int grade)</pre> <p>Gets a Student object Grade object.</p> <p>Returns:</p> <p>Grade, a Student object Grade object.</p>

getAvg
<pre>double getAvg()</pre> <p>Gets the Student object average.</p> <p>Returns:</p> <p>Double, the Student object average.</p>

getAsnAvg
<pre>double getAsnAvg()</pre> <p>Gets the Student object assignment average.</p> <p>Returns:</p> <p>Double, the Student object assignment average.</p>

getExmAvg
<pre>double getExmAvg()</pre> <p>Gets the Student object exam average.</p> <p>Returns:</p> <p>Double, the Student object exam average.</p>

setNameFirst
<pre>void setNameFirst(java.lang.String nameFirst)</pre> <p>Sets the Student object first name.</p> <p>Parameters:</p> <p>nameFirst - String, the Student object first name.</p>

setNameLast
<pre>void setNameLast(java.lang.String nameLast)</pre> <p>Sets the Student object last name.</p> <p>Parameters:</p> <p>nameLast - String, the Student object last name.</p>

setNumber
<pre>void setNumber(int number)</pre> <p>Sets the Student object number.</p> <p>Parameters:</p> <p>number - String, the Student object number.</p>

setEmail
<pre>void setEmail(java.lang.String email)</pre> <p>Sets the Student object email.</p> <p>Parameters:</p> <p>email - String, the Student object email.</p>

setAvg
<pre>void setAvg(double avg)</pre> <p>Sets the Student object average.</p> <p>Parameters:</p> <p>avg - Double, the Student object average.</p>

setAsnAvg
<pre>void setAsnAvg(double asnAvg)</pre> <p>Sets the Student object assignment average.</p> <p>Parameters:</p> <p>asnAvg - Double, the Student object assignment average.</p>

setExmAvg
<pre>void setExmAvg(double exmAvg)</pre> <p>Sets the Student object exam average.</p> <p>Parameters:</p> <p>exmAvg - Double, the Student object exam average.</p>

addGrade
<pre>boolean addGrade(int deliver, double grade, java.lang.String type, double weight)</pre> <p>Adds a grade to the StudentGrades object.</p> <p>Parameters:</p> <p>deliver - Integer, the grade insertion position.</p> <p>grade - Double, the grade.</p> <p>type - String, the deliverable type.</p> <p>weight - Double, the grade weight.</p> <p>Returns:</p> <p>boolean, true if the grade was inserted successfully, false otherwise.</p>

removeGrade
<pre>boolean removeGrade(int deliver, java.lang.String type)</pre> <p>Removes a grade from the StudentGrades object.</p> <p>Parameters:</p> <p>deliver - Integer, the position at where the grade will be inserted.</p> <p>type - String, the type of the deliverable.</p> <p>Returns:</p> <p>boolean, true if the grade was removed successfully, false otherwise.</p>

equals
<pre>boolean equals(Student stud)</pre> <p>An equals method.</p> <p>Parameters:</p> <p>stud - Student, the Student object.</p> <p>Returns:</p> <p>boolean, true if the Student object is equal to this, false otherwise.</p>

toString
<pre>java.lang.String toString()</pre> <p>A toString method.</p> <p>Overrides:</p> <p>toString in class java.lang.Object</p> <p>Returns:</p> <p>String, the Student object information string.</p>

cs2212.team4

Class StudentGrades

java.lang.Object
cs2212.team4.StudentGrades

All Implemented Interfaces:

StudentGradesADT, java.io.Serializable

```
public class StudentGrades
extends java.lang.Object
implements StudentGradesADT, java.io.Serializable
```

The StudentGrades class will contain all the grades for each Student. team4-gradebook application

Version:

1.0 2/28/2014

Interface StudentGradesADT

All Known Implementing Classes:

StudentGrades

public interface **StudentGradesADT**

StudentGradesADT implements the method interface for the StudentGrades class.

Version:

1.0 2/28/2014

Author:

Zaid Albirawi

Method Summary

Methods

Modifier and Type	Method and Description
boolean	add (int deliver, double grade, java.lang.String type, double weight) A helper method that will add the student grades to the grades list.
double	getAsnAvg () Gets the Student object assignment average.
double	getAvg () Gets the Student object average.
double	getExmAvg () Gets the Student object exam average.
double	getGrade (int grade) Gets the Grade object at grade from grades list.
boolean	remove (int deliver, java.lang.String type) Removes a grade from the StudentGrades object.
void	setAsnAvg (double asnAvg) Sets the Student object assignment average.
void	setAvg (double avg) Sets the Student object average.
void	setExmAvg (double exmAvg) Sets the Student object exam average.

Method Detail

getAvg

double getAvg()
Gets the Student object average.

Returns:
Double, the Student object average.

getAsnAvg

double getAsnAvg()
Gets the Student object assignment average.

Returns:
Double, the Student object assignment average.

getExmAvg

double getExmAvg()
Gets the Student object exam average.

Returns:
Double, the Student object exam average.

getGrade

double getGrade(int grade)
Gets the Grade object at grade from grades list.

Returns:
Double, the grade of the Student object.

setAvg

void setAvg(double avg)
Sets the Student object average.

Parameters:
avg - Double, the Student object average.

setAsnAvg

void setAsnAvg(double asnAvg)
Sets the Student object assignment average.

Parameters:
asnAvg - Double, the Student object assignment average.

setExmAvg

void setExmAvg(double exmAvg)
Sets the Student object exam average.

Parameters:
exmAvg - Double, the Student object exam average.

add

boolean add(int deliver, double grade, java.lang.String type, double weight)
A helper method that will add the student grades to the grades list.

Parameters:
deliver - Integer, will hold the location at which the grade will be inserted in the grades list.
grade - Double, will hold the student's grade value.

Returns:
return a boolean to weather the grade was successfully added or not.

remove

boolean remove(int deliver, java.lang.String type)
Removes a grade from the StudentGrades object.

Parameters:
deliver - Integer, the position at where the grade will be inserted.
type - String, the type of the deliverable.

Returns:
boolean, true if the grade was removed successfully, false otherwise.
